Data Interpretation

Question:

Grouping Data

Given employee information.

Task

Group employees by department and calculate:

- Total salary
- Average salary
- Employee count

Code:

```
import pandas as pd

# Employee data
data = {
    "Employee": ["A", "B", "C", "D", "E", "F"],
    "Department": ["HR", "IT", "HR", "Finance", "IT", "Finance"],
    "Salary": [35000, 50000, 40000, 60000, 55000, 65000]
}

# Create DataFrame
df = pd.DataFrame(data)

# Group by Department and calculate summary
result = df.groupby("Department").agg(
    Total_Salary=("Salary", "sum"),
    Average_Salary=("Salary", "mean"),
    Employee_Count=("Employee", "count")
)
```

```
)  
# Display result  
print(result)
```

Output:

...	Department	Total_Salary	Average_Salary	Employee_Count
	Finance	125000	62500.0	2
	HR	75000	37500.0	2
	IT	105000	52500.0	2
